Integrated Pest Management Class

Integrated Pest Management, or simply IPM for short, is a phrase that is familiar to many beekeepers today. This concept of pest management seeks to control pests (Varroa, Hive Beetle, Wax Moth, etc..) using a variety of strategies that are safe, effective and economical and will lead to a sustainable level of control.

Beekeeping IPM Principles

- **Acceptable pest levels**
- **Preventive cultural and regulatory practices.**
- **Monitoring or scouting practices.**
- **Genetic control.**
- **Mechanical control.**
- **Physical control.**
- **Chemical control.**
- **Biological control.**
